

**WORLD OLIMPIAD  
SUSTAINABLE DEVELOPMENT  
AND  
ENVIRONMENTAL PROTECTION**

**2023**

**BOOKLET**

*The mission of the Olympics is:*

- *That students develop their knowledge and skills in order to benefit society and improve living conditions.*
- *To inspire the next generation of great minds to become leaders in science and innovation,*
- *That students develop comprehensive abilities including confidence, communication and leadership.*
- *That students studiously approach solving problems in the field of sustainable development and environmental protection*
- *For students to present their views and research results for solving problems in the field of sustainable development and environmental protection*
- *That students give concrete proposals (solutions) to problems in the field of sustainable development and environmental protection.*

***“Let’s take care of the Earth and the nature on it, because we didn’t inherit them from our ancestors, but we borrowed them from our descendants.”***

***Chief Sitting Bull***

# DESCRIPTION AND MISSION OF THE ORGANIZER

Center for Talents emerged as a compelling necessity for guiding talented individuals in the fields of natural, technical, social and humanistic sciences. The Center serves the need for the development of domestic science, technological and other funds of knowledge based on our own research work and application of results-based national development programs in all work areas. This approach is imposed by modern international research and development, as well as market processes, and the global struggle for competitive products, services and knowledge.

Modern tendencies - maximum use of natural resources, compliance with the requirements of preservation and environmental protection, restructuring and modernization of the economy, rapid development of food production, energy, electronics, metallurgy, chemical industry, information technology - imposed the necessity of systematic detection, identification and stimulation of gifted individuals. In order to respond to current challenges of the modern education system and especially the implementation of the Programme of encouraging and training young researchers, the Center for Talents supports the work with gifted individuals in various scientific fields. The work of the Center is aimed at revealing and identifying talented individuals and, with the involvement of the scientists as teachers and mentors, providing gifted students with the conditions for their development in the scientific area of interest. Through implementation of the planned program assignments, Center for Talents strives to make a valuable contribution to the development and promotion of science through discovering talented children and supporting their engagement in scientific research.
